

Top Ten Reasons to protect Office Equipment with ESP

ESP
REAL POWER PROTECTION

Destructive and Disruptive Protection!

1. ESP Power Filters are the Industry Standard for Power Filtration. ESP protects office equipment from catastrophic lighting, dangerous surges, over/under voltage events, and disruptive noise that negatively and intermittently affect your devices every day.
2. Dirty power rarely gets blamed for erratic machine behavior. Instead operator's question the reliability of the device, the effectiveness of their service technician, or even their buying decision.
3. Installing ESP Power Filters keeps office equipment running at 100% maximum reliability and keeps your work environment as productive as possible.
4. ESP Power Filters lowers workplace frustration by significantly reducing logic lock-ups, error codes, and annoying paper jams.
5. ESP Power Filters improves your ownership experience, by not only protecting the electrical connection, but also the ETL verified, CAT5e network, and the fax line from surges and lightning.
6. American consumers spend \$545 million dollars a year on surge protectors purchased in retail locations that are inferior to the protection ESP Power Filters provide. *Home investments are protected – why not protect sensitive office equipment critical to your work day?*
7. Proactively protecting workplace PCs, Servers, Copiers, Printers, and MFPs, minimizes downtime, eliminates operator frustration, and helps maintain a greener office.
8. ESP Power Filters clean intermittent “Noisy Power” causing disruptive and frustrating erratic machine behavior.
9. ESP Power Filters reduce service calls, and protect hard drives, power supplies, and electronic boards from the negative effects of dirty power, which cumulatively attacks these components causing them to prematurely fail requiring needless replacement.
10. No one's ever been fired for recommending the installation of ESP Power Filters on their office equipment!
